

CONTROL PANELS DESIGNED TO PROTECT

Patterson offers a full line of standard control panels and remote control push-button stations for all electric winches and capstans. Our standard panels include thermal overloads, motor overheat protection circuits, and current sensing relays.

These features ensure that your motor is completely protected, and will maximize its life, and the life of your winch. All components have been sized specifically for our winches, their duty cycle, and the specific needs of the marine winch application.

We also offer custom controls to meet your needs. From variable frequency drives, remote push button stations, pilot house control stations, and more, Patterson will work with you to meet your individual requirements.
